

Cold Door

LED lighting system for cooler doors

Cold Door lighting system provides crisp, uniform illumination across doors for walk-in coolers/freezers and remote glass-door reach-ins.

- Illuminates product facings with crisp, uniform light dispersion across the door
- Powers up to a 5-door frame with a single power supply
- **Up to 85% total energy savings over typical fluorescent fixtures**

Truncated parabolic reflector – Conceals the light source while directing the light across product packaging to accommodate narrow shelf depths.

Power controller – Allows the lights to be set at three different power settings (Standard, MerchandiserMax, and Energy Saver) to balance light output with energy savings.

Occupancy sensing – Dims lights with optional controls based on customer occupancy to further increase energy savings.
